

Specification for DALI SC-A

Module for decentralised control of 4 DALI scenes with floating switches within a comfortDIM DALI controller.

- Ultra-compact control module for built-in mounting (e.g. flush-type boxes) with which memory recall commands can be sent for four DALI scenes.
- For each scene input a connection can be made to conventional floating one-way switches (make contacts). DALI is not SELV. The installation instructions for low voltage therefore apply.
- Scene numbers can be set on the DALI SC-A by a rotary switch on the back of the casing.
- The unit is supplied via the DALI control line

Technical data:

- Power supply: From the DALI line
- Max. current 6 mA
- Scenes: 4 successive scene numbers can be selected (options: 1–16)
- Input: floating switches (make contacts)
- Output: DALI signal, digital serial (a signal is sent only when the switch is actuated.)
- Perm. ambient temperature 0–50 °C
- Casing material made of flame-resistant polycarbonate; halogen-free
- Dimensions LxWxH: 41 x 30 x 11 mm
