Product description

- LED emergency lighting module
- Escape route emergency lighting; illuminance $E = 1.0 \text{ lux}$ (as per EN 1838)
- Compatible with EM powerLED 1 W

Properties

- High-power LED in chip-on-board technology (COB)
- Long life thanks to integrated heat removal
- Optimised system efficiency with specific beam characteristic
- Integrated bi-colour status LED
- Reverse polarity protection
- Small dimensions
- Different installation options
- Connection: Cable 300 mm

Standards, page 2
Colour temperatures and tolerances, page 3

Specific technical data

<table>
<thead>
<tr>
<th>Type</th>
<th>Typ. luminous flux</th>
<th>Min. luminous flux</th>
<th>Max. current $^{(1)}$</th>
<th>Power $^{(2)}$</th>
</tr>
</thead>
<tbody>
<tr>
<td>EM-ER 003</td>
<td>90 lm</td>
<td>80 lm</td>
<td>350 mA</td>
<td>1.2 W</td>
</tr>
</tbody>
</table>

$^{(1)}$ Data for operation with 350 mA.
$^{(2)}$ If the max. temperature limits are exceeded, the life of the module will be reduced or the module may be damaged.
$^{(3)}$ The temperature of the TALEX module at the $tc$-point is to be measured in the thermally stable state. For $tc$-point see the above diagram.
$^{(4)}$ Exceeding the max. operating current leads to an overload on the TALEX module. This may in turn result in a significant reduction in lifetime (even destruction of the TALEX module).
$^{(5)}$ Tolerance range for optical and electrical data: ±15 %.
$^{(6)}$ Colour temperature and colour rendering index CRI according to CIE 1931.
## Optical properties

### Max. spacing for >1.0 lux for maintained mode

<table>
<thead>
<tr>
<th>Height (m)</th>
<th>Centre to end (m)</th>
<th>Centre to centre (m)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>

</tr>
<tr>
<td>3.0</td>
<td>1.45 m</td>
<td>3.90 m</td>
</tr>
<tr>
<td>4.0</td>
<td>1.65 m</td>
<td>4.35 m</td>
</tr>
<tr>
<td>5.0</td>
<td>1.75 m</td>
<td>4.40 m</td>
</tr>
</tbody>
</table>

All values at $t_c = 45^\circ C$

1. Maintenance factor = 0.8
2. Photometric data available on request
3. Distance between module and wall

### $t_c$ point, ambient temperature and lifetime

The temperature at $t_c$ reference point is crucial for the light output and life time of a TALEX product.

Compliance with the maximum permissible reference temperature at the $t_c$ point must be checked under operating conditions in a thermally stable state. The maximum value must be determined under worst-case conditions for the relevant application.

### Thermal behaviour

<table>
<thead>
<tr>
<th>Storage temperature</th>
<th>-20 – 80°C</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating temperature</td>
<td>-20 – 50°C</td>
</tr>
<tr>
<td>$t_c$ max. (at typ. current)</td>
<td>75 °C</td>
</tr>
</tbody>
</table>

### Mounting

#### Surface mounting:

![Surface mounting diagram](image1)

#### Recessed mounting:

![Recessed mounting diagram](image2)

Glow-wire test according to EN 61347-1 with increased temperature of 960 °C passed.
Emergency lighting units
TALEX emergency lighting modules

Electrical supply/choice of converter

TALEXengine EM-ER 003 modules from Tridonic are not protected against overvoltages, overcurrents, overloads or short-circuit currents. Safe and reliable operation can only be guaranteed in conjunction with a converter which complies with the relevant standards. The use of EM powerLED converters from Tridonic in combination with TALEXengine EM-ER 003 modules guarantees the necessary protection for safe and reliable operation.

If a converter other than Tridonic EM powerLED converter is used, it must provide the following protection:
- SELV
- Short-circuit protection
- Overload protection
- Overtemperature protection

The TALEXengine EM-ER 003 module must be supplied by a constant current converter. Operation with a constant voltage converter will lead to an irreversible damage of the module. The TALEXengine EM-ER 003 modules is protected against reversed polarity.

Chemical substance may harm the LED module. Chemical reactions could lead to colour shift, reduced luminous flux or a total failure of the module caused by corrosion of electrical connections.

Materials which are used in LED applications (e.g. sealings, adhesives) must not produce dissolver gas. They must not be condensation curing based, acetate curing based or contain sulfur, chlorine or phthalate. Avoid corrosive atmosphere during usage and storage.

EOS/ESD safety guidelines

The device / module contains components that are sensitive to electrostatic discharge and may only be installed in the factory and on site if appropriate. EOS/ESD protection measures have been taken. No special measures need be taken for devices/modules with enclosed casings (contact with the pc board not possible), just normal installation practice. Please note the requirements set out in the document EOS / ESD guidelines (Guideline_EOS_ESD.pdf) at: http://www.tridonic.com/com/en/technical-docs.asp

Coordinates and tolerances according to CIE 1964

The specified colour coordinates are measured by a current impulse of 350 mA and a duration of 100 ms. The ambient temperature of the measurement is ta = 25 °C. The measurement tolerance of the colour coordinates are ± 0.01.

CIE coordinates:

<table>
<thead>
<tr>
<th>Colour</th>
<th>red</th>
<th>black</th>
<th>orange</th>
<th>pink</th>
</tr>

<tbody>
<tr>
<td>Function</td>
<td>+</td>
<td>-</td>
<td>Status A</td>
<td>Status K</td>
</tr>
</tbody>
</table>

Notes

The wiring acc. to the information above is valid for the usage in conjunction with EM powerLED ST and EM powerLED PRO. When the EM-ER 003 is used with the EM powerLED BASIC the polarity of the indicator LED has to be changed. Connect the orange lead to the terminal “P” and the pink lead to the terminal “O”.

When two EM-ER module are used with an EM powerLED 2W converter module only one indicator LED can be connected to the driver.

When the EM-ER is used in mains operation a separate indication LED must be used.

Note: The indication LED is part of the EM-ER module.
