Product description
• Emergency lighting LED Driver for manual testing
• For self-contained emergency lighting
• For LED modules with a forward voltage of 10 – 52 V
• SELV for output voltage < 60 V DC
• Low profile casing (21 x 30 mm cross-section)
• For luminaire installation
• 5-year guarantee

Properties
• Non maintained operation
• 1 or 3 h rated duration
• Operating time selectable with plug (duration link)
• Compatible with all dimmable and non-dimmable constant current LED Driver (see 5.3, LED Driver compatibility)
• 3-pole technology: 2-pole LED module changeover and delayed power switching for the LED Driver
• Automatic shutdown of output if LED load is out of range
• Constant power output
• Maximum light output for all LED modules
• Electronic charge system
• Deep discharge protection
• Short-circuit-proof battery connection
• Polarity reversal protection for battery

Batteries
• High-temperature cells
• NiCd or NiMH batteries
• D, Cs or LA cells
• 4-year design life
• 1-year guarantee
• For battery compatibility refer to chapter „Battery selection”

Standards, page 4
Wiring diagrams and installation examples, page 5
EM converterLED BASIC 50 V
BASIC series

Note: LED Driver supplied with duration link in 3 hours position. Remove duration link for 1 hour duration. Duration link must be set before battery and mains connection. The EM converterLED BASIC 134 NiCd is supplied without a duration link. The duration is set to 3 hours and cannot be changed.

Technical data
Rated supply voltage 220 – 240 V
Mains frequency 50 / 60 Hz
Typ. λ at 230 V, 50 Hz) 0.6
LED module forward voltage range 10 – 52 V
Output current see page 5
Time to light < 0.25 s from detection of emergency event
Overvoltage protection 320 V (for 1 h)
Maximum output voltage 60 V
Battery charging time 20 h
Ambient temperature range ta -5 – + 55 °C
Max. casing temperature tc 70 °C
Mains voltage changeover threshold according to EN 60598-2-22
Type of protection IP20

- EN 62384

Meaning of marking

Double or reinforced insulation for built-in electronic LED Drivers

1.1 Glow-wire test

according to EN 61347-1 with increased temperature of 850 °C passed.

1.2 Isolation and electric strength testing of luminaires

Electronic LED-Drivers can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an isolation test with 500 VDC for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The isolation resistance must be at least 2 MΩ.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1,500 VAC (or 1,414 x 1,500 VDC). To avoid damage to the electronic devices this test must not be conducted.

2. Thermal details and life-time

2.1 Life-time

Average life-time 50,000 hours under rated conditions with a failure rate of less than 10 %. Average failure rate of 0.2 % per 1000 operating hours.

3. Installation / Wiring

3.1 Wiring diagram

One or more LED modules with a total forward voltage of 10 to 52 V can be connected to the EM converterLED 50V module. These LED module(s), marked with ‘Emergency’ are operated in emergency mode from the associated battery. In normal mains mode all LED modules are operated by the mains LED Driver.

Use of the test switch:
For checking the device function press the test switch for a minimum of 3 seconds.
EM converterLED BASIC with one LED module for non-maintained emergency operation

EM converterLED BASIC with a standard LED Driver and one LED module for mains and emergency operation

EM converterLED BASIC with a standard LED Driver and series operation of LED modules

One LED module is operated in emergency mode.
All LED modules are operated in mains mode.
EM converterLED BASIC with a standard LED Driver and series operation of LED modules

Two or more LED modules are operated in emergency mode. All LED modules are operated in mains mode.

EM converterLED BASIC with a standard LED Driver and parallel operation of LED modules

One LED module is operated in emergency mode. All LED modules are operated in mains mode.
Emergency lighting units

EM converterLED

EM converterLED BASIC with a standard LED Driver and parallel operation of LED modules

3.2 Wiring type and cross section

Solid wire with a cross section of 0.5 – 1.5 mm². Strip 8 – 9 mm of insulation from the cables to ensure perfect operation of terminals.

Wiring: LED module/LED Driver/supply

- **wire preparation:**
  - 0.5 – 1.5 mm²
  - 8 – 9 mm

3.3 Loose wiring

Loosen wire through twisting and pulling or using a Ø 1 mm release tool

3.4 Wiring guidelines

- The LED terminals, battery, indicator LED and test switch terminals are classified as SELV (output voltage < 60 V DC). Keep the wiring of the input terminals separated from the wiring of the SELV equivalent terminals or consider special wiring (double insulation, 6 mm creepage and clearance) when these connections should be kept SELV.
- The output to the LED is DC but has high frequency content, which should be considered for good EMC compliance.
- LED leads should be separated from the mains connections and wiring for good EMC performance.
- Maximum lead length on the LED terminals is 3 m. For a good EMC performance keep the LED wiring as short as possible.
- Maximum lead length for the test switch and Indicator LED connection is 1 m. The test switch and Indicator LED wiring should be separated from the LED leads to prevent noise coupling.
- Battery leads are specified with 0.5 mm cross section and a length of 1.3 m.
- To avoid the damage of the control gear, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.).

To ensure that a luminaire containing LED emergency units complies with EN 55015 for radio frequency conducted interference in both normal and emergency mode it is essential to follow good practice in the wiring layout.

Within the luminaire the switched and unswitched 50 Hz supply wiring must be routed as short as possible and be kept as far away as possible from the LED leads. Through wiring may affect the EMC performance of the luminaire.

The length of LED leads must not be exceeded. Note that the length of the EM converterLED leads is added to the length of the leads from the LED Driver to the EM converterLED module when considering max. permitted lead length of the LED Driver.
3.5 Maximum lead length

- LED: 3 m
- Status indication LED: 1 m
- Batteries: 1.3 m

Note: The length of LED leads to the LED module must not be exceeded. Note that the length of the EM converterLED leads is added to the length of the leads from the LED Driver to the EM converterLED module when considering max. permitted lead length of the LED Driver. Leads should always be kept as short as possible.

3.6 Use of different phases

The use of different phases for switched line and unswitched line is allowed. When using different phases, the unswitched line must fail if the switched line fails. This is required to assure correct switching into emergency mode. It can be realised with a relay.

4. Mechanical values

4.1 Housing properties

Casing manufactured from polycarbonate.

4.2 Mechanical data accessories

- LED status indicator
  - Green
  - Mounting hole: 6.5 mm dia
  - Lead length: 0.3 m / 1.0 m
  - Insulation rating: 90 °C
  - Plug connection
- Test switch
  - Mounting hole: 7.0 mm dia
  - Lead length: 0.55 m
  - Plug connection
- Battery leads
  - Quantity: 1 red and 1 black
  - Length: 1.3 m
  - Wire type: 0.5 mm² solid conductor
  - Insulation rating: 90 °C
- Battery end termination
  - Push on 4.8 mm receptacle to suit battery spade fitted with insulating cover
- Module end termination
  - 8.0 mm stripped insulation

Two-piece batteries are supplied with a 200 mm lead with 4.8 mm receptacle at each end and insulating covers to connect the separate sticks together.

5.2 Typ. LED current/voltage characteristics

The LED current in emergency mode is automatically adjusted by the EM converterLED module based on the total forward voltage of the LED modules connected and the associated battery.

EM converterLED BASIC 103 50V
Article number: 89800178
3.6 V battery voltage
750 – 960 mA battery discharge current (tolerance)

EM converterLED BASIC 104 50V
Article number: 89800179
4.8 V battery voltage
750 – 960 mA battery discharge current (tolerance)

Note: LED peak current measured at the max. battery discharge current and at a max. battery voltage of 4.5 V (3 cells) or 6 V (4 cells).

5. Data sheet 04/18-EM022-22
Subject to change without notice.

Article number: 89800180
4.8 V battery voltage
290 – 370 mA battery discharge current (tolerance)

5.3 LED Driver compatibility

The EM converterLED emergency unit use 3 pole technology and is compatible with most LED Drivers on the market, however it is important to check that the rating of the LED Driver does not exceed the values specified below:

- The max. allowed output current rating of the associated LED Driver is 2.4 A peak (current rating of switching relays of EM converterLED)
- The max. allowed inrush current rating of the associated LED Driver is 60 A peak for 1 ms or 84 A for 255 μs (inrush current rating of switching relay of EM converterLED)
- The max. allowed output voltage of the associated LED Driver applied to the EM converterLED output is 450V (voltage withstand between adjacent contact of the single switching relay of the EM converterLED)
- The max. allowed LED load of the associated LED Driver is 150 W in operation. The load must be an LED module.

6. Functions

6.1 Duration link selection

Emergency lighting LED Driver supplied with duration link in 3 hours position.

The position of the link will only be read on first power up. If it is changed afterwards both the battery and mains supply must be disconnected for 10 seconds to enable the EM converterLED to read the new link position on reconnection of the battery and mains. It will lead to a false battery failure indication if the link is changed after installation without this reset.

Max. short term temperature (reduced life-time): 70°C
Max. number discharge cycles: 4 cycles per year plus 30 cycles during commissioning
Max. storage time: 6 months

7.5 Wiring batteries
Connection method: 4.8 x 0.5 mm spade tag welded to end of cell.
For stick packs this connection is accessible after the battery caps have been fitted.
To inhibit inverter operation disconnect the batteries by removing the connector from the battery spade tag.
For further information refer to corresponding battery datasheet.

7.6 Storage, installation and commissioning
Relevant information about storage conditions, installation and commissioning are provided in the battery datasheets.
