Product description

- Emergency lighting LED driver for manual testing
- For LED modules with a forward voltage of 10 – 54 V
- SELV for output voltage < 60 V DC
- Low profile casing (21 x 30 mm cross-section)
- For luminaire installation
- Compatible with Tridonic’s LLE FLEX modules (ADV, EXC)
- Nominal lifetime up to 100,000 h
- 5 years guarantee (conditions at www.tridonic.com)

Properties

- Non maintained operation
- 1 or 3 h rated duration
- Operating time selectable with plug (duration link)
- Compatible with all dimmable and non-dimmable constant current LED driver (see chapter 5.3)
- 3-pole technology: 2-pole LED module changeover and delayed power switching for the LED driver
- Automatic shutdown of output if LED load is out of range
- Constant power output
- Maximum light output for all LED modules
- Electronic charge system
- Deep discharge protection
- Short-circuit-proof battery connection
- Polarity reversal protection for battery

Batteries

- High-temperature cells
- NiCd or NiMH batteries
- D, Cs or LA cells
- 4-year design life
- 1-year guarantee
- For battery compatibility refer to chapter 7.1

Standards, page 5

Emergency lighting units
EM converterLED

Technical data

- Rated supply voltage: 220 – 240 V
- Mains frequency: 50 / 60 Hz
- Typ. λ (at 230 V, 50 Hz): 0.6C
- LED module forward voltage range: 10 – 54 V
- Output current: see chapter 5.2
- Time to light: < 0.25 s from detection of emergency event
- Overvoltage protection: 320 V (for 4.8 h)
- U-OUT (including open-/short-circuit and double load): 60 V
- Max. open circuit voltage: 60 V
- Battery charging time: 24 h$^3$
- Ambient temperature range ta: -5 ... + 55 °C
- Max. casing temperature tc: 75 °C
- Mains voltage changeover threshold: according to EN 60598-2-23
- Mains surge capability (between L – N): 1 kV
- Mains surge capability (between L/N – PE): 2 kV
- Type of protection: IP20
- Lifetime: up to 100,000 h
- Guarantee (conditions at www.tridonic.com): 5 years
- Dimensions LxWxH: 179 x 30 x 21 mm

Permissible cable jacket diameter: 2.2 – 9 mm

Note: LED driver supplied with duration link in 3 hours position. Remove duration link for 1 hour duration. Duration link must be set before battery and mains connection.
Product description

- Optional strain-relief set for independent applications
- Transforms the LED driver into a fully class II compatible LED driver (e.g., ceiling installation)
- Easy and tool-free mounting to the LED driver, screwless cable-clamp channels with strain-relief (240 x 43 x 30 mm)

EMcLED Strain-relief set 240x43x30mm

Permissible cable jacket diameter 2.2 – 9 mm

- EN 60068-2-30
- EN 62384
- according to EN 50172
- according to EN 60598-2-22

1.1 Glow-wire test

According to EN 61347-1 with increased temperature of 850 °C passed.

1.2 Insulation and electric strength testing of luminaires

Electronic LED-drivers can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an insulation test with 500 V DC for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The insulation resistance must be at least 2 MΩ.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1,500 V AC (or 1,414 x 1,500 V DC ). To avoid damage to the electronic devices this test must not be conducted.

2. Thermal details and lifetime

2.1 Lifetime

Average lifetime 50,000 hours under rated conditions with a failure rate of less than 10 %. Average failure rate of 0.2 % per 1000 operating hours.

<table>
<thead>
<tr>

<td></td>
</tr>
</tbody>
</table>

The emergency lighting LED driver is designed for a lifetime stated above under reference conditions and with a failure probability of less than 10 %.

The relation of tc to ta temperature depends also on the luminaire design. If the measured tc temperature is approx. 5 K below tc max., ta temperature should be checked and eventually critical components (e.g. ELCAP) measured. Detailed information on request.

3. Installation / Wiring

3.1 Wiring diagram

One or more LED modules with a total forward voltage of 10 to 54 V can be connected to the EM converterLED 50V module. These LED module(s), marked with “Emergency” are operated in emergency mode from the associated battery. In normal mains mode all LED modules are operated by the LED driver from the mains supply.

Use of the test switch:
For checking the device function press the test switch for a minimum of 3 seconds.
EM converterLED BASIC with one LED module for non-maintained emergency operation

EM converterLED BASIC with a standard LED driver and one LED module for mains and emergency operation

EM converterLED BASIC with a standard LED driver and series operation of LED modules

One LED module is operated in emergency mode.
All LED modules are operated in mains mode.
EM converterLED BASIC with a standard LED driver and **series** operation of LED modules

Two or more LED modules are operated in emergency mode. All LED modules are operated in mains mode.

EM converterLED BASIC with a standard LED driver and **parallel** operation of LED modules

One LED module is operated in emergency mode. All LED modules are operated in mains mode.
EM converterLED BASIC with a standard LED driver and parallel operation of LED modules

Two or more LED modules are operated in emergency mode. All LED modules are operated in mains mode.

3.2 Wiring type and cross section

Solid wire with a cross section of 0.5 – 1.5 mm². Strip 8 – 9 mm of insulation from the cables to ensure perfect operation of terminals.

Wiring: LED module/LED driver/supply

wire preparation:

8 – 9 mm

3.3 Loose wiring

Loosen wire through twisting and pulling or using a Ø 1 mm release tool

3.4 Wiring guidelines

- The LED terminals, battery, indicator LED and test switch terminals are classified as SELV (output voltage < 60 V DC). Keep the wiring of the input terminals separated from the wiring of the SELV classified terminals or consider special wiring (double insulation, 6 mm creepage and clearance) when these connections should be kept SELV.
- The output to the LED is DC but has high frequency content, which should be considered for good EMC compliance.
- Separate LED leads from the mains and DALI connections and wiring for good EMC performance.
- Maximum lead length on the LED terminals is 3 m. For a good EMC performance keep the LED wiring as short as possible.
- Route the secondary wires (LED module) in parallel to ensure good EMC performance.
- Maximum lead length for the Test switch and Indicator LED connection is 1 m. Separate the test switch and indicator LED wiring from the LED leads to prevent noise coupling.
- Battery leads are specified with 0.5 mm cross section and a length of 1.3 m
- Protect the wiring against short circuits to earth (sharp edged metal parts, metal cable clips, louvers, etc.) to avoid the damage of the control gear.

To ensure that a luminaire containing LED emergency units complies with EN 55015 for radio frequency conducted interference in both normal and emergency mode it is essential to follow good practice in the wiring layout.

Within the luminaire route the switched and unswitched 50 Hz supply wiring as short as possible and keep it as far away as possible from the LED leads. Through wiring may affect the EMC performance of the luminaire.

Do not exceed the max. length of LED leads to the LED module. Note that the length of the EM converterLED leads to the LED module is added to the length of the leads from the LED driver to the EM converterLED module when considering the max. permitted lead length of the LED driver.
3.5 Maximum lead length

LED 3 m (6 m loop)
Status indication LED 1 m
Batteries 1.3 m

3.6 Use of different phases

The use of different phases for switched line and unswitched line is allowed. When using different phases, the unswitched line must fail if the switched line fails. This is required to assure correct switching into emergency mode. It can be realised with a relay.

3.7 Compatibility with LLE FLEX modules

The EM converterLED can be used within certain restrictions to operate constant voltage LED loads from the Tridonic LLE FLEX (ADV, EXC) product range. A certain minimum length of the LLE FLEX is required for correct operation. Detailed information in the download area of the ST and PRO product pages at www.tridonic.com (EM converterLED manual).

4. Mechanical values

4.1 Housing properties

• Casing manufactured from polycarbonate.
• Type of protection: IP20
• Max. torque at the mounting screws: 0.8 Nm

4.2 Mechanical data accessories

LED status indicator
• Green
• Mounting hole 6.5 mm diameter, 1 – 1.6 thickness
• Lead length 0.3 m / 0.6 m / 1.0 m
• Insulation rating: 90 °C
• Plug connection

* Represents basic insulation
  • Represents double or reinforced insulation

When using a non-SELV LED driver insulate the battery, LED, test switch and indicator LED in the luminaire according to the U-OUT rating of the LED driver.
5.3 Typ. LED current/voltage characteristics

The LED current in emergency mode is automatically adjusted by the EM converterLED module based on the total forward voltage of the LED modules connected and the associated battery. The start of the LED in emergency mode does not result in a current peak.

**EM converterLED BASIC 202 NiCd/NiMH 50V**

4.8 V battery voltage
850 – 960 mA battery discharge current (tolerance)
5.4 LED driver compatibility

The EM converterLED emergency unit use 3 pole technology and is compatible with most LED drivers on the market, however it is important to check that the rating of the LED driver does not exceed the values specified below:

- The max. allowed output current rating of the associated LED driver is 2 A eff (current rating of the terminals of EM converterLED) and 2.4 A peak (current rating of switching relays of EM converterLED)
- The max. allowed inrush current rating of the associated LED driver is 60 A peak for 1 ms or 84 A for 255 μs (inrush current rating of switching relay of EM converterLED)
- The max. allowed output voltage (U-OUT) of the associated LED driver applied to the EM converterLED output is 450 V (voltage withstand between adjacent contact of the single switching relay of the EM converterLED)
- The max. allowed LED load of the associated LED driver is 150 W in operation. The load must be an LED module.

Check compatibility with short function tests (duration of several seconds).

6. Functions

6.1 Duration link selection

<table>
<thead>
<tr>
<th>Duration</th>
<th>Usage duration link</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 h</td>
<td>With link</td>
</tr>
<tr>
<td>1 h</td>
<td>Without link</td>
</tr>
</tbody>
</table>

Emergency lighting LED driver supplied with duration link in 3 hours position.

The position of the link will only be read on first power up. If it is changed afterwards both the battery and mains supply must be disconnected for 10 seconds to enable the EM converterLED to read the new link position on reconnection of the battery and mains. It will lead to a false battery failure indication if the link is changed after installation without this reset.

² The battery will be charged below 0.9 V. The EM converterLED will indicate a battery fault.

The emergency lighting LED driver will recharge the battery normally after running the test of 61347-2-7 CL 22.3 (abnormal operating conditions).
7.3 Accu-NiCd

4.2 / 4.5 Ah
International designation: KRMU 33/62
Battery voltage/cell: 12 V
Cell type: D
Case temperature range to ensure 4 years design life: +5 °C to +55 °C
Max. short term battery case temperature (shorter than 1 month over the battery lifetime): 70 °C
Max. number discharge cycles: 12 cycles per year plus 4 cycles during commissioning
Max. storage time

4.0 Ah
International designation: KRMU 19/90
Battery voltage/cell: 12 V
Cell type: LA
Case temperature range to ensure 4 years design life: +5 °C to +65 °C
Max. short term battery case temperature (shorter than 1 month over the battery lifetime): 70 °C
Max. number discharge cycles: 4 cycles per year plus 30 cycles during commissioning
Max. storage time

7.4 Accu-NiMH

2.2 Ah
International designation: HRMU 23/43
Battery voltage/cell: 12 V
Cell type: Cs
Case temperature range to ensure 4 years design life: +5 °C to +50 °C
Max. short term battery case temperature (shorter than 1 month over the battery lifetime): 70 °C
Max. number discharge cycles: 4 cycles per year plus 30 cycles during commissioning
Max. storage time

4.0 Ah
International designation: HRMU 19/90
Battery voltage/cell: 12 V
Cell type: LAL
Case temperature range to ensure 4 years design life: +5 °C to +40 °C
Max. short term battery case temperature (shorter than 1 month over the battery lifetime): 70 °C
Max. number discharge cycles: 4 cycles per year plus 30 cycles during commissioning
Max. storage time

7.5 Accupack-NiCd

4.5 Ah
Battery voltage/cell: 12 V
Cell type: D
Ambient temperature range to ensure 4 years design life: +5 °C to +40 °C, +65 °C
Max. short term battery case temperature (shorter than 1 month over the battery lifetime): 70 °C
Max. number discharge cycles: 4 cycles per year plus 4 cycles during commissioning
Max. storage time

7.6 Accupack-NiMH

2.2 Ah
Battery voltage/cell: 12 V
Cell type: Cs
Ambient temperature range to ensure 4 years design life: +5 °C to +35 °C
Max. short term battery case temperature (shorter than 1 month over the battery lifetime): 70 °C
Max. number discharge cycles: 4 cycles per year plus 4 cycles during commissioning
Max. storage time

4.0 Ah
Battery voltage/cell: 12 V
Cell type: LAL
Ambient temperature range to ensure 4 years design life: +5 °C to +40 °C
Max. short term battery case temperature (shorter than 1 month over the battery lifetime): 70 °C
Max. number discharge cycles: 4 cycles per year plus 4 cycles during commissioning
Max. storage time

For a higher battery temperature rating for NiMH 4 Ah refer to the EM converterLED xx MH/LiFePO4 product range.

7.7 Wiring batteries
To inhibit inverter operation disconnect the batteries by removing the connection at battery side.

For further informations refer to corresponding battery datasheet.

7.8 Storage, installation and commissioning
Relevant information about storage conditions, installation and commissioning are provided in the battery datasheets.

8. Miscellaneous

8.1 Maximum number of switching cycles
EM converterLEDs are tested with 50,000 mains switching cycles of the associated LED driver.

8.2 Battery replacement
After a battery replacement and a subsequent full charge cycle (24 h) a duration test is mandatory to prove that with the new battery the rated duration is achieved.

8.3 Mains-connected transformers
The EM converterLED does not contain mains-connected windings of transformers.

8.4 Additional information
Additional technical information at www.tridonic.com → Technical Data

Lifetime declarations are informative and represent no warranty claim. No warranty if device was opened.
