Product description
- Self-contained emergency lighting LED driver with self-test function
- Non maintained operation
- For LED modules with a forward voltage of 10 – 54 V
- SELV for output voltage < 60 V DC
- For luminaire installation
- Compatible with Tridonic's LLE FLEX modules (ADV, EXC)
- Nominal lifetime up to 100,000 h
- 5 years guarantee (conditions at www.tridonic.com)

Functions
- 1, 2 or 3 h rated duration selectable with duration link
- Constant power output
  - Self-test
- Weekly function test
- Yearly duration test

Driver compatibility
- 3-pole technology: 2-pole LED module changeover and delayed power switching for the LED driver
- For further information see chapter „LED driver compatibility”

Battery management
- Intelligent charge system
- Deep discharge protection
- Polarity reversal protection for battery

Batteries
- NiCd or NiMH batteries
- 4-year design life
- 1-year guarantee
- For battery compatibility refer to chapter „Battery selection”

Standards, page 4
Wiring diagrams and installation examples, page 5
Emergency lighting units
EM converterLED

Technical data

- Rated supply voltage: 220 – 240 V
- AC voltage range: 198 – 264 V
- Mains frequency: 50 / 60 Hz
- LED module forward voltage range: 10 – 54 V
- Output current: see chapter 5.2
- Starting time: < 0.5 s from detection of emergency event
- Overvoltage protection: 320 V (for 48 h)
- U-OUT (including open-/ short-circuit and double load): 60 V
- Max. open circuit voltage: 60 V
- Ambient temperature range ta: -25 ... +55 °C
- Max. casing temperature tc: 80 °C
- Mains voltage changeover threshold: according to EN 60598-2-22
- Mains surge capability (between L – N): 1 kV
- Mains surge capability (between L/N – PE): 2 kV
- Type of protection: IP20
- Rest mode max. number of emergency units: 100
- Rest mode max. wiring distance: 1000 m
- Functional test: Weekly 5s test
- Duration test: Yearly 1 h / 2 h / 3 h test
- Guarantee (conditions at www.tridonic.com): 5 years
- Dimensions LxWxH: 179 x 30 x 21 mm

EM = Emergency
EMcLED Strain-relief set 240x43x30mm

Product description
- Optional strain-relief set for independent applications
- Transforms the LED driver into a fully class II compatible LED driver (e.g. ceiling installation)
- Easy and tool-free mounting to the LED driver, screwless cable-clamp channels with strain-relief (240 x 43 x 30 mm)

Permissible cable jacket diameter 2.2 – 9 mm

1. Standards

- EN 61347-1
- EN 61347-2-13
- EN 61347-2-7
- EN 55015
- EN 61000-3-2
- EN 61000-3-3
- EN 61547
- EN 60068-2-64
- EN 60068-2-29
- EN 60068-2-30
- EN 62384
  - according to EN 50172
  - according to EN 60598-2-22
  - according to EN 62034

Meaning of marking:
Double or reinforced insulation for built-in electronic LED drivers. The control gear relies upon the luminaire enclosure for protection against accidental contact with live parts.

1.1 Glow-wire test

according to EN 61347-1 with increased temperature of 850 °C passed.

1.2 Insulation and electric strength testing of luminaires

Electronic LED-drivers can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an insulation test with 500 V DC for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The insulation resistance must be at least 2 MΩ.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1,500 V AC (or 1,414 x 1,500 V DC). To avoid damage to the electronic devices this test must not be conducted.

2. Thermal details and lifetime

2.1 Lifetime

Average lifetime 50,000 hours under rated conditions with a failure rate of less than 10 %. Average failure rate of 0.2 % per 1000 operating hours.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

The emergency lighting LED driver is designed for a lifetime stated above under reference conditions and with a failure probability of less than 10 %.

The relation of tc to ta temperature depends also on the luminaire design. If the measured tc temperature is approx. 5 K below tc max., ta temperature should be checked and eventually critical components (e.g. ELCAP) measured. Detailed information on request.

3. Installation / Wiring

3.1 Wiring diagram

One or more LED modules with a total forward voltage of 10 to 54 V can be connected to the EM converterLED module. These LED module(s), marked with “Emergency” are operated in emergency mode from the associated battery. In normal mains mode all LED modules are operated by the mains LED driver.
EM converterLED SELFTEST with one LED module for non-maintained emergency operation

EM converterLED SELFTEST with a standard LED driver and one LED module for mains and emergency operation

EM converterLED SELFTEST with a standard LED driver and series operation of LED modules

One LED module is operated in emergency mode.
All LED modules are operated in mains mode.
EM converterLED SELFTEST with a standard LED driver and parallel operation of LED modules

One LED module is operated in emergency mode. All LED modules are operated in mains mode.

3.2 Wiring type and cross section
Solid wire with a cross section of 0.5 – 1.5 mm². Strip 8 – 9 mm of insulation from the cables to ensure perfect operation of terminals.

Wire preparation:
0.5 – 15 mm²
8 – 9 mm

3.3 Loose wiring
Loosen wire through twisting and pulling or using a Ø 1 mm release tool

3.4 Wiring guidelines
- The output to the LED is DC but has high frequency content, which should be considered for good EMC compliance.
- Separate LED leads from the mains and REST connections and wiring for good EMC performance.
- Maximum lead length on the LED terminals is 3 m. For a good EMC performance keep the LED wiring as short as possible.
- Route the secondary wires (LED module) in parallel to ensure good EMC performance.
- Maximum lead length for the Test switch and Indicator LED connection is 1 m. Separate the test switch and Indicator LED wiring from the LED leads to prevent noise coupling.
- Battery leads are specified with 0.5 mm cross section and a length of 0.8 m.
- REST terminals are mains proof.
- Protect the wiring against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.) to avoid the damage of the control gear.

To ensure that a luminaire containing LED emergency units complies with EN 55015 for radio frequency conducted interference in both normal and emergency mode it is essential to follow good practice in the wiring layout.

Within the luminaire route the switched and unswitched 50 Hz supply wiring as short as possible and keep it as far away as possible from the LED leads. Through wiring may affect the EMC performance of the luminaire.

Do not exceed the max. length of LED leads to the LED module. Note that the length of the EM converterLED leads to the LED module is added to the length of the leads from the LED driver to the EM converterLED module when considering the max. permitted lead length of the LED driver.

3.5 Maximum lead length
LED 3 m
Status indication LED 1 m
Batteries 0.8 m

Note: The length of LED leads to the LED module must not be exceeded. Note that the length of the EM converterLED leads is added to the length of the leads from the LED driver to the EM converterLED module when considering the max. permitted lead length of the LED driver. Leads should always be kept as short as possible.
3.6 Use of different phases

The use of different phases for switched line and unswitched line is allowed. When using different phases, the unswitched line must fail if the switched line fails. This is required to assure correct switching into emergency mode. It can be realised with a relay.

3.7 Compatibility with LLE FLEX modules

The EM converterLED can be used within certain restrictions to operate constant voltage LED loads from the Tridonic LLE FLEX (ADV, EXC) product range. A certain minimum length of the LLE FLEX is required for correct operation. Detailed information in the download area of the ST and PRO product pages at www.tridonic.com (EM converterLED manual).

4. Mechanical values

4.1 Housing properties

- Casing manufactured from polycarbonate.
- Type of protection: IP20

4.2 Mechanical data accessories

LED status indicator
- Bi-colour
- Mounting hole 6.5 mm diameter, 1 – 1.6 mm thickness
- Lead length 0.3 m / 10 m
- Insulation rating: 90 °C
- Plug connection

Test switch
- Mounting hole 7.0 mm diameter
- Lead length 0.55 m
- Plug connection

Battery connection
- Plug connection 0.3 m
- Extension 0.5 m

* Represents basic insulation
** Represents double or reinforced insulation

When using a non-SELV LED driver insulate the battery, LED, test switch and indicator LED in the luminaire according to the U-OUT rating of the LED driver.
5.3 Typ. LED current/voltage characteristics

The LED current in emergency mode is automatically adjusted by the EM converterLED module based on the total forward voltage of the LED modules connected and the associated battery. The start of the LED in emergency mode does not result in a current peak.

EM converterLED ST 202 NiCd/NiMH 50V
Article number: 89800646
2.4 V battery voltage
730 – 790 mA battery discharge current (tolerance)

EM converterLED ST 203 NiCd/NiMH 50V
Article number: 89800647
3.6 V battery voltage
780 – 840 mA battery discharge current (tolerance)

EM converterLED ST 204 NiCd/NiMH 50V
Article number: 89800648
4.8 V battery voltage
800 – 860 mA battery discharge current (tolerance)
5.4 LED driver compatibility

The EM converterLED emergency unit use 3 pole technology and is compatible with most LED drivers on the market, however it is important to check that the rating of the LED driver does not exceed the values specified below:

- The max. allowed output current rating of the associated LED driver is 2 A eff (current rating of the terminals of EM converterLED) and 2.4 A peak (current rating of switching relays of EM converterLED)
- The max. allowed inrush current rating of the associated LED driver is 60 A peak for 1 ms or 84 A for 255 μs (inrush current rating of switching relay of EM converterLED)
- The max. allowed output voltage (U-OUT) of the associated LED driver applied to the EM converterLED output is 450 V (voltage withstand between adjacent contact of the single switching relay of the EM converterLED)
- The max. allowed LED load of the associated LED driver is 150 W in operation. The load must be an LED module.

6. Functions

6.1 Duration link selection

<table>
<thead>
<tr>
<th>Duration</th>
<th>Link position</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 hr</td>
<td>Position A</td>
</tr>
<tr>
<td>2 hr</td>
<td>No duration link</td>
</tr>
<tr>
<td>1 hr</td>
<td>Position B</td>
</tr>
</tbody>
</table>

Emergency lighting LED driver supplied with duration link in 3 hours position (position A).

The position of the link will only be read on first power up. If it is changed afterwards both the battery and mains supply must be disconnected for 10 seconds to enable the EM converterLED to read the new link position on reconnection of the battery and mains. It will lead to a false battery failure indication if the link is changed after installation without this reset.

6.2 Status indication

System status is indicated by a bi-colour LED.

<table>
<thead>
<tr>
<th>LED indication</th>

6.3 Commissioning

After installation of the luminaire and initial connection of the mains supply and battery supply to the EM converterLED ST the unit will commence charging the batteries for the initial charge time. The recharge occurs also if a new battery is connected or the module exits the rest mode condition. The following automatic commissioning duration test is only performed when a battery is replaced and fully charged.

6.4 Testing

Commissioning test

A full commissioning test is carried out automatically after permanent connection of the supply for 5 days. The easy commissioning feature will set the initial test day and time to ensure random testing of units.

Functional test

Functional tests are carried out for 5 seconds on a weekly basis under the control of the Micro controller. Initiation and timing of these tests is set during the commissioning of the luminaire.

Duration test

A full duration test is carried out yearly to check the capacity of the batteries.

For a full description of commissioning and test features please refer to application notes.

Test switch

An optional test switch can be wired to each EM converterLED ST. This can be used to:
- Initiate a 5 seconds function test: press 200 ms < T < 1 s
- Execute function test as long as switch pressed: press > 1 s
- Reset selftest timer (adjust local timing): press > 10 s
Timer reset functionality

The timer for function and duration test can be set to a particular time of the day by either pressing the test switch for longer than 10 seconds or cycling the unswitched line supply 5 times within 1 minute. The timer adjustment will enable the test start time to be defined manually at time in day when the timer was reset. It will also disable the adaptive test algorithm thereby forcing the unit to perform the test at the same time rather than it being defined by the adaptive algorithm. This function will only work provided the interval time is greater than zero (automatic test mode enabled). The delay timer value set when the unit was commissioned will be reloaded in order to randomise the tests between adjacent units.

Rest Mode / Inhibit Mode

Emergency operation is automatically started when the mains supply is switched off. If the Rest Mode is activated, the discharging of the battery will be minimized by switching off the LED output. If the Inhibit Mode has been activated before the mains supply is switched off, Rest Mode will be automatically activated if the mains supply is switched off within 15 minutes. Rest Mode and Inhibit Mode can be initiated by applying a short pulse between 9.5 and 22.5 Vdc in amplitude for a period of 150 to 1,000 ms. This pulse shall be applied to terminals marked Rest.

After a mains reset the EM converterLED ST exits the Rest Mode. Rest Mode and Inhibit Mode can both be disabled by applying a voltage pulse of 1,000 to 2,000 ms to the terminals marked as Rest to send the RE-LIGHT/RESET INHIBIT command.

9 The battery will be charged below 0.9 V. The EM converterLED will indicate a battery fault.

The emergency lighting LED driver will recharge the battery normally after running the test of 61347-2-7 CL 22.3 (abnormal operating conditions).
7.3 Accu-NiCd

4.2 / 4.5 Ah
International designation
Battery voltage/cell
Cell type
Case temperature range
to ensure 4 years design life
Max. short term battery case temperature (shorter than 1 month over the battery lifetime)
Max. number discharge cycles
Max. storage time

7.4 Accu-NiMH

2.2 Ah
International designation
Battery voltage/cell
Cell type
Case temperature range
to ensure 4 years design life
Max. short term battery case temperature (shorter than 1 month over the battery lifetime)
Max. number discharge cycles
Max. storage time

4.0 Ah
International designation
Battery voltage/cell
Cell type
Case temperature range
to ensure 4 years design life
Max. short term battery case temperature (shorter than 1 month over the battery lifetime)
Max. number discharge cycles
Max. storage time

7.5 Accupack-NiCd

4.5 Ah
Battery voltage/cell
Cell type
Ambient temperature range
to ensure 4 years design life
Max. short term battery case temperature (shorter than 1 month over the battery lifetime)
Max. number discharge cycles
Max. storage time

7.6 Accupack-NiMH

2.2 Ah
Battery voltage/cell
Cell type
Ambient temperature range
to ensure 4 years design life
tc point
Max. short term battery case temperature (shorter than 1 month over the battery lifetime)
Max. number discharge cycles
Max. storage time

4.0 Ah
Battery voltage/cell
Cell type
Ambient temperature range
to ensure 4 years design life
tc point
Max. short term battery case temperature (shorter than 1 month over the battery lifetime)
Max. number discharge cycles
Max. storage time

For a higher battery temperature rating for NiMH 4 Ah refer to the EM converterLED xx MH/LiFePO4 product range.

7.7 Wiring batteries
To inhibit inverter operation disconnect the batteries by removing the connection at battery side.
For further informations refer to corresponding battery datasheet.

7.8 Storage, installation and commissioning
Relevant information about storage conditions, installation and commissioning are provided in the battery datasheets.

8. Miscellaneous

8.1 Maximum number of switching cycles
EM converterLEDs are tested with 50,000 mains switching cycles of the associated LED driver.

8.2 Battery replacement
After a battery replacement and a subsequent full charge cycle (24 h) a duration test is mandatory to prove that with the new battery the rated duration is achieved.

8.3 Mains-connected transformers
The EM converterLED does not contain mains-connected windings of transformers.

8.4 Additional information
Additional technical information at www.tridonic.com → Technical Data
Lifetime declarations are informative and represent no warranty claim. No warranty if device was opened.
