EM powerLED BASIC FX lp 75 W
Combined emergency lighting LED Driver

Product description
- Fixed output LED Driver for mains operation
- Emergency lighting LED Driver with manual test function
- For self-contained emergency lighting
- For LED modules with a forward voltage of 50 – 220 V
- For luminaire installation
- Low profile casing (21 x 30 mm)
- 5 years guarantee

Properties
- 6 – 75 W output power
- Constant current LED operation
- Adjustable output current between 80 and 400 mA via ready-2mains Programmer or I-SELECT 2 plugs
- Integrated emergency lighting unit
- 1 or 3 hr rated duration
- Automatic shutdown of output if LED load is out of range
- Green charge status display LED
- Electronic multi-level charge system
- Polarity reversal protection for battery
- Deep discharge protection
- Short-circuit-proof battery connection

Batteries
- High-temperature cells
- NiCd or NiMH batteries
- D, Cs or LA cells
- 4-year design life
- 1-year guarantee
- For battery compatibility refer to table „Battery selection“

EM powerLED

**Technical data**

- **Rated supply voltage**: 220 – 240 V
- **AC voltage range**: 198 – 264 V
- **Mains frequency**: 50 / 60 Hz
- **Typ. current (at 230 V, 50 Hz, full load)**: 380 mA
- **Leakage current (at 230 V, 50 Hz, full load)**: < 250 µA
- **Max. input power**: 85 W
- **Typ. λ (at 230 V, 50 Hz, normal operation)**: 0.98
- **Overvoltage protection**: 320 V (for 48 h)
- **Battery charging time**: < 24 h
- **U-OUT**: 280 V
- **Typ. input current in no-load operation 1 hr (charging)**: 16 mA
- **Typ. input current in no-load operation 3 hr (charging)**: 18 mA
- **Typ. input power in no-load operation 1 hr (charging)**: 2 W
- **Typ. input power in no-load operation 3 hr (charging)**: 2.4 W
- **In-rush current (peak / duration)**: 26 A / 280 µs
- **THD (at 230 V, 50 Hz, full load)**: < 10 %
- **Time to light**: < 0.5 s from detection of emergency event
- **Starting time (mains off)**: < 1.3 s
- **Starting time (stand-by)**: < 250 ms
- **Turn off time (at 230 V, 50 Hz, full load)**: < 50 ms
- **Max. output current peak (non-repetitive)**: < output current + 35 %
- **Output LF current ripple (< 120 Hz)**: < 5 %
- **Output current tolerance**: ± 5 %
- **Ambient temperature ta**: -5 ... +50 °C
- **Max. casing temperature tc**: 75 °C
- **Mains surge capability (between L - N)**: 1 kV
- **Mains surge capability (between L/N - PE)**: 2 kV
- **Surge voltage at output side (against PE)**: 2 kV
- **Dimensions LxWxH**: 360 x 30 x 21 mm
- **Mains voltage changeover threshold**: according to EN 60598-2-22
- **Type of protection**: IP20
- **Lifetime**: up to 50,000 h
- **Guarantee**: 5 years

---

1. Depending on the selected output current.
2. EM = Emergency
3. The table only lists a number of possible operating points but does not cover each single point. The output current can be set within the total value range in 1-mA-steps.
4. Output current is mean value.
5. Output voltage range defined in normal operation.
6. Ambient temperature range defined in normal operation.
7. Not compatible with I-select (generation 1).
Product description

- For connection to the emergency lighting LED Driver
- For checking the device function

Product description

- A green LED indicates that charging current is flowing into the battery

Product description
- Ready-for-use resistor to set output current value
- Compatible with LED Driver featuring I-select 2 interface; not compatible with I-select (generation 1)
- Resistor is base insulated
- Resistor power 0.25 W
- Current tolerance ± 2 % to nominal current value
- Compatible with LED Driver series PRE and EXC

Example of calculation
- $R \, [\,k\Omega\,] = \frac{5 \, V}{I_{\text{out}} \, [\,mA\,]} \times 1000$
- Resistor value tolerance ± 1 %; resistor power ≥ 0.1 W; base insulation necessary
- When using a resistor value beyond the specified range, the output current will automatically be set to the minimum value (resistor value too big), respectively to the maximum value (resistor value too small)

The EM powerLED is designed for a lifetime stated above under reference conditions and with a failure probability of less than 10 %.

The relation of tc to ta temperature depends also on the luminaire design.
If the measured tc temperature is approx. 5 K below tc max., ta temperature should be checked and eventually critical components (e.g. ELCAP) measured. Detailed information on request.

3. Installation / Wiring

3.1 Wiring diagrams

Wiring diagram EM powerLED BASIC FX without sensor

The connected LED module will be used for mains and emergency operation.

The mains power must be removed before changing the LED load.

Secondary switching of LEDs is not allowed and may cause damage to the LEDs. The hot plug-in of LEDs during normal operation may result in high current peaks.
3.2 Wiring type and cross section

Solid wire with a cross section of 0.5 – 1.5 mm². Strip 8 – 9 mm of insulation from the cables to ensure perfect operation of terminals.

- LED module/LED Driver/supply
  - wire preparation: 0.5 – 15 mm²
  - 8 – 9 mm

3.3 Loose wiring

Loosen wire through twisting and pulling or using a Ø 1 mm release tool

Maximum lead length

- LED: 3 m
- status indication LED: 1 m
- batteries: 1 m

3.4 Wiring guidelines

- The output to the LED is DC but has high frequency content, which should be considered for good EMC compliance.
- LED leads should be separated from the mains connections and wiring for good EMC performance.
- Maximum lead length on the LED terminals is 3 m. For a good EMC performance keep the LED wiring as short as possible.
- The secondary wires (LED module) should be routed in parallel to ensure good EMC performance.
- Maximum lead length for the Test switch and Indicator LED connection is 1 m. The test switch and Indicator LED wiring should be separated from the LED leads to prevent noise coupling.
- Battery leads are specified with 0.5 mm cross section and a length of 1.3 m.
- To avoid the damage of the control gear, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.).

To ensure that a luminaire containing LED emergency units complies with EN 55015 for radio frequency conducted interference in both normal and emergency mode it is essential to follow good practice in the wiring layout.

Within the luminaire the switched and unswitched 50Hz supply wiring must be routed as short as possible and be kept as far away as possible from the LED leads. Through wiring may affect the emc performance of the luminaire. The length of LED leads must not be exceeded.

The output current depends on the forward voltage and the tolerance of the LED modules.

4. Mechanical data

4.1 Housing properties

- Low-profile metal casing with white cover
- Type of protection IP 20

4.2 Mechanical data accessories

LED status indicator

- Green
- Mounting hole 6.5 mm diameter, 1 – 1.6 mm thickness
- Lead length 0.8 m
- Insulation rating: 90 °C

Test switch

- Mounting hole 7.0 mm diameter
- Lead length 0.55 m

Battery leads

- Quantity: 1 red and 1 black
- Length: 13 m
- Wire type: 0.5 mm² solid conductor
- Insulation rating: 90 °C

Battery end termination

Push on 4.8 mm receptacle to suit battery spade fitted with insulating cover or plug connection.

Module end termination

8.0 mm stripped insulation

Two-piece batteries are supplied with a 200 mm lead with 4.8 mm receptacle at each end and insulating covers to connect the separate sticks together.
5. Electrical values

• Represents basic insulation
• • Represents double or reinforced insulation

Insulate the battery, LED, test switch and indicator LED in the luminaire according to the U-OUT rating of the LED Driver.
5.3 Typ. LED current/voltage characteristics

The LED current in emergency mode is automatically adjusted by the EM powerLED module based on the total forward voltage of the LED modules connected and the associated battery. The start of the LED in emergency mode does not result in a current peak.

7. Functions

7.1 Function: adjustable current

The output current of the EM powerLED can be adjusted in a certain range. For adjustment there are two options available.

Option 1: I-select 2
By inserting a suitable resistor or third party resistor into the I-select 2 interface, the current value can be adjusted. The relationship between output current and resistor value can be found in the chapter “Accessories I-SELECT 2 Plugs”.

Please note that the resistor values for I-select 2 are not compatible with I-select (generation 1). Installation of an incorrect resistor may cause irreversible damage to the LED module(s).

Resistors for the main output current values can be ordered from Tridonic (see accessories).

Option 2: ready2mains
Adjustment is done by the ready2mains Programmer and the corresponding configuration software (see ready2mains documentation).

Current adjustment can only be done five times over ready2mains.

To program the EM powerLED a connected load is necessary that is within the operating window of the EM powerLED.

The priority for current adjustment methods is I-select 2 followed by ready2mains (lowest priority).

7.2 Short-circuit behaviour

In case of a short-circuit at the LED output the LED output is switched off. After restart of the EM powerLED the output will be activated again. The restart can either be done via mains reset or via interface ready2mains.

7.3 No-load operation

The EM powerLED will not be damaged in no-load operation. The output will be deactivated and is therefore free of voltage. If a LED load is connected the device has to be restarted before the output will be activated again.

7.4 Overload protection

If the output voltage range is exceeded the EM powerLED turns off the LED output. After restart of the EM powerLED the output will be activated again. The restart can be done via mains reset.

7.5 Overtemperature protection

The EM powerLED is protected against temporary thermal overheating. If the temperature limit is exceeded the output current of the LED module(s) is reduced. The temperature protection is activated approx. +5 °C above tc max (see page 2).

7.6 Forward voltage out of range

If the forward voltage is out of range the unit switches to shut down mode. After elimination of the short circuit a mains reset (SL off/on) is necessary.

8.3 Accu-NiCd

4.2 / 4.5 Ah
International designation  KRMU 33/62
Battery voltage/cell  12 V
Cell type  D
Case temperature range  +5 °C to +55 °C
to ensure 4 years design life
Max. short term battery case temperature (shorter than 1 month over the battery lifetime)  70 °C
Max. number discharge cycles 12 cycles per year plus 4 cycles during commissioning
Max. number discharge cycles
Max. storage time

8.4 Accu-NiMH

2.2 Ah
International designation  HRMU 23/43
Battery voltage/cell  12 V
Cell type  Cs
Case temperature range  +5 °C to +50 °C
to ensure 4 years design life
Max. short term battery case temperature (shorter than 1 month over the battery lifetime)  70 °C
Max. number discharge cycles 4 cycles per year plus 30 cycles during commissioning
Max. number discharge cycles
Max. storage time

4.0 Ah
International designation  HRMU 19/90
Battery voltage/cell  12 V
Cell type  LA
Case temperature range  +5 °C to +45 °C
to ensure 4 years design life
Max. short term battery case temperature (shorter than 1 month over the battery lifetime)  70 °C
Max. number discharge cycles 4 cycles per year plus 30 cycles during commissioning
Max. number discharge cycles
Max. storage time

8.5 Accupack-NiCd

4.5 Ah
Battery voltage/cell  12 V
Cell type  D
Ambient temperature range  +5 °C to +40 °C
+45 °C
tc point
Max. short term battery case temperature (shorter than 1 month over the battery lifetime)  70 °C
Max. number discharge cycles 4 cycles per year plus 4 cycles during commissioning
Max. number discharge cycles
Max. storage time

8.6 Accupack-NiMH

2.2 Ah
Battery voltage/cell  12 V
Cell type  Cs
Ambient temperature range  +5 °C to +35 °C
+60 °C
tc point
Max. short term battery case temperature (shorter than 1 month over the battery lifetime)  70 °C
Max. number discharge cycles 4 cycles per year plus 4 cycles during commissioning
Max. number discharge cycles
Max. storage time

4.0 Ah
Battery voltage/cell  12 V
Cell type  LAL
Ambient temperature range  +5 °C to +35 °C
+60 °C
tc point
Max. short term battery case temperature (shorter than 1 month over the battery lifetime)  70 °C
Max. number discharge cycles 4 cycles per year plus 4 cycles during commissioning
Max. number discharge cycles
Max. storage time

For a higher battery temperature rating for NiMH 4 Ah refer to the EM converterLED xx MH/LiFePO4 product range.

8.7 Batteries

Connection method: 4.8 x 0.5 mm spade tag welded to end of cell
For stick packs this connection is accessible after the battery caps have been fitted.
To inhibit inverter operation disconnect the batteries by removing the connector from the battery spade tag.
For further information refer to corresponding battery datasheet.

8.8 Storage, installation and commissioning

Relevant information about storage conditions, installation and commissioning are provided in the battery datasheets.
9. Miscellaneous

9.1 Maximum number of switching cycles

All LED Drivers are tested with 50,000 switching cycles. The actually achieved number of switching cycles is significantly higher.

9.2 Insulation and electric strength testing of luminaires

Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an insulation test with 500 V DC for one second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The insulation resistance must be at least 2 MΩ.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1500 V AC (or 1.414 x 1500 V DC). To avoid damage to the electronic devices this test must not be conducted.

9.3 Conditions of use and storage

Humidity: 5 % up to max. 85 %, not condensed (max. 56 days/year at 85 %)

Storage temperature: -40 °C up to max. +80 °C

The devices have to be acclimatised to the specified temperature range (ta) before they can be operated.

9.4 Additional information

Additional technical information at www.tridonic.com → Technical Data

Guarantee conditions at www.tridonic.com → Services

Lifetime declarations are informative and represent no warranty claim. No warranty if device was opened.
