Product description

- LED emergency module suitable for surface mounted installation
- Complete set with integrated electronics, LED module, heat sink, optics and battery
- Includes click-in multi-lens option for anti-panic, escape route and spot illumination
- DALI interface and automatic test function
- BESA compatible mounting

Properties

- Output power 1.5 W
- Very low stand-by power loss
- Non-maintained variants
- 1 or 3 h rated duration (separate variants)
- Simple connection of Lithium Iron Phosphate battery with plug-in system
- White or black housing color options
- Back box in two different heights available (for rear and side entry)
- 5 years guarantee (conditions at www.tridonic.com) electronic (LED Driver)
- 4 years guarantee battery

Standards, page 5

Wiring diagrams and installation examples, page 6
Technical data

Rated supply voltage AC 220 – 240 V
Input voltage range AC (tolerance for safety) 198 – 264 V
Input voltage range AC (tolerance for performance) 198 – 254 V
Mains frequency 50 / 60 Hz
Overvoltage protection 320 V (for 48 h)
Time to light (emergency operation) < 0.5 s from detection of emergency event
Output current tolerance ± 5 %
LF current ripple ± 5 %
Ambient temperature ta +5 ... +40 °C
Mains voltage changeover threshold According to EN 60598-2-22
Type of protection IP20
Impact protection rating**IK07
Protection class II
Colour temperature 6,500 K
Colour tolerance Mac Adams 3
Colour rendering index CRI > 80
Lifetime up to 50,000 h

1) IK07 in case of fixing the front plate to the back box with a M3x10 self-tapping screw (not supplied). With clip fixing only IK03.
2) EM = Emergency
3) RCM valid only for article 89800766
Product description

- High temperature LiFePO4 cells for use with EM ready2apply surface mounted emergency lighting units
- 6-year design life (up to 30°C ambient temperature)
- 4-year design life (up to 40°C ambient temperature)
- 3 years guarantee

Properties

- Certified quality manufacturer
- Charge efficiency > 90 %
- Low self discharge
- Simple connection with plug-in system
- Protection and monitoring circuit built into battery sleeve
- Deep discharge protection
- Suitable for emergency lighting equipment as per IEC 60598-2-22

1.1 Glow-wire test

according to EN 60598-1 with increased temperature of 850 °C passed.

2. Thermal data

2.1 Temperature range

According to the standard IEC 60598-1 a LED Driver for remote installation has a max. case temperature of 90 °C. The ambient temperature range ta for the EM R2A PRO is defined to meet this requirement.

2.2 Expected lifetime

Average lifetime 50,000 hours under rated conditions with a failure rate of less than 10 %. Average failure rate of 0.2 % per 1000 operating hours.

<table>
<thead>
<tr>

2.3 Storage conditions

- Humidity: 5 % up to max. 85 %, not condensed (max. 56 days/year at 85 %)

Note: The devices have to be within the specified temperature range (ta) before they are operated.

- Store batteries within the specified temperature range in low humidity conditions. Optimal storage conditions are:
  - Temperature: -20 °C to +25 °C for up to 12 months
  - -20 °C to +35 °C for up to 6 months
  - Relative humidity: 65 % ±5 %
- Avoid atmosphere with corrosive gas
- Disconnect batteries before store or delivery
- Avoid storage of discharged batteries

3. Installation / Wiring

3.1 Lens assembly

- Wear gloves when mounting the lens
- Take care of the mounting direction of the escape route lens
- Use screwdriver for replacing/Removing lens
1. + 2. Push lens clips with screwdriver via openings on both sides
3. Remove lens

3.2 Luminaire assembly

- Back box preparation:
  - For rear entry: 2 drill locations are provided for a 20 mm hole
  - For side entry (use of deep back box): 3 locations are provided for use with 20 mm cable glands.
- If required use a M3x10 self tapping screw (not supplied) to secure the front plate to the back box. Drill a 3 mm hole in the back box indent.
- Fix the back box to the ceiling (BESA compatible mounting).
- Note: direction arrows allowing correct orientation for corridor lens.
- Change lenses if required (pre-fitted with anti panic lens).
- Wiring of the mains terminal block will require a suitable tool to open the cage clamp (size 3.5 x 0.5 mm blade).
- Plug battery into connector.
- Fix front plate to back box: locating battery side tabs first, push home, a click will be heard when front plate is inserted correctly.
- The deep back box has a parking facility for up to 6 Wago 2773 series connectors (not supplied) to aid through wiring cable management.
- Take care when drilling to prevent damage to internal components.

If an impact protecting rating of above IK03 to a max. of IK07 is required, use an M3x10 self-tapping screw for the assembly.

6. Interfaces / communication

6.1 Control input (DALI DTT)

The control input is non-polar for digital control signals (DALI). The control signal is not SELV. Control cable has to be installed in accordance to the requirements of low voltage installations.

7. Functions

7.1 Status indication

System status is indicated by a bi-colour LED and by a DALI status flag. The indication LED is integrated in the bezel.

</tbody>
</table>

7.2 Testing

DALI Control

A DALI command from a suitable control unit can be used to initiate function and duration tests at individually selected times. Status flags are set for report back and data logging of results.

When a DALI bus has not been connected or when a DALI bus is connected but the DALI default DELAY and INTERVAL times have not been re-set by sending appropriate DALI commands, then the EM R2A PRO will conduct self-tests in accordance with the default times set within the EEPROM. These default times are factory pre-set, in accordance with the DALI standard EN 62386-202, to conduct an automatic function test every 7 days and a duration test every 52 weeks. Since the DELAY time is factory pre-set to Zero, all units are tested at the same time. Test times can be changed with a command over the DALI bus.

The DELAY and INTERVAL time values must be re-set when the emergency system test times are to be scheduled by a DALI control and monitoring system. Note that once the default values have been set to Zero, tests will only be conducted following a command from the control system. If the DALI bus is disconnected the EM R2A PRO does not revert to self-testing mode.

Note: If the battery is connected the DALI communication is only possible after power reset.

Addressing

The EM R2A PRO includes the EZ easy addressing system which allows addressing and identification by using the bi-colour LED. Binary address codes given by the LED can be simply converted to the DALI addresses 0 to 63. For single handed addressing using this method it is necessary to send a broadcast indent command every 3 to 9 seconds. During this command the LEDs will be switched off and the indication LED will flash the 6 bit binary address preceded by a 3 second start indication period.

Commissioning

After installation of the luminaire and initial connection of the mains supply and battery supply to the EM R2A PRO the unit will commence charging the batteries for 20 hours (initial charge). Afterwards the module will conduct a commissioning test for the full duration. The 20 hours recharge occurs also if a new battery is connected or the module exits the rest mode condition. The following automatic commissioning duration test is only performed when a battery is replaced and fully charged (after 20 hrs) and the interval time is not set to zero, otherwise the system is expected to perform the testing.

Functional test

The time of day and frequency of the 5 seconds function test can be set by the DALI controller. The default setting is a 5 seconds test on a weekly basis.

Duration test

The time of day and frequency of the duration test test can be set by the DALI controller. The default setting is a duration test conducted every 52 weeks.

Test switch

Test switch is integrated in the bezel. This can be used to test:
- initiate a 5 seconds function test: press 200 ms < T < 1 s
- execute function test as long as switch pressed: press > 1 s
- reset selftest timer (adjust local timing): press > 10 s

To initiate a test use a suitable tool, refer to drawing below.

Note: Press test switch carefully to avoid damaging it.

Timer reset functionality

The timer for function and duration test can be set to a particular time of the day by either pressing the test switch for longer than 10 seconds or cycling the unswitched line supply 5 times within 1 minute. The timer adjustment will enable the test start time to be defined manually at time in day when the timer was reset. It will also disable the adaptive test algorithm thereby forcing the unit to perform the test at the same time rather than it being defined by the adaptive algorithm. This function will only work provided the interval time is greater than zero (automatic test mode enabled). The delay timer value set when the unit was commissioned will be reloaded in order to randomise the tests between adjacent units.

Prolong time

Prolong time can be set by the DALI controller. This is the delay time between return of the mains supply and the end of the emergency operation. The default prolong time is set as 0 minutes as specified within the DALI standard. Indicator LED will stay off for the duration of the prolong time.

Note: Press test switch carefully to avoid damaging it.
Rest Mode
Rest mode can be initiated by the DALI controller. The appropriate command should be sent after the mains supply has been disconnected and whilst the module is in emergency operation. After a mains reset the EM R2A PRO exits the rest mode. EM R2A PRO supports the re-light command via the DALI bus.
Max. rest mode duration: 21 days from fully charged battery

DALI Controller
DALI controllers and hardware/software solutions are available from Tridonic. Please refer to the Lighting controls section.

7.3 Technical data batteries
Accu Lithium Iron Phosphate
International designation IFpR 19/66
Battery voltage/cell 3.2 V
Single cell dimensions
Diameter 18 mm
Height 65 mm
Capacity two cell pack 3.0 Ah
Max. short term temperature (reduced lifetime) 70 °C
Max. number discharge cycles 50 cycles total
Packing quantity 1 pc. per carton

Comply with UN 38.3 and IEC 62133 (safety testing) protected against over charge, over discharge, charging at excessive temperatures, short-circuit and over current.

For battery data see separate data sheet.

</table>

All values for \( t_a = 30^\circ \)C

Luminous flux: 200 lm

- Maintenance factor = 0.8, photometric data available on request
- Distance between module and wall
- Distance between two modules

9. Miscellaneous

9.1 Black Box data recording

Recording of several parameters only accessible for Tridonic.

9.2 Additional information

Additional technical information at www.tridonic.com → Technical Data

The light source of this luminaire is not replaceable; when the light source reaches its end of life replace the whole luminaire. Lifetime declarations are informative and represent no warranty claim. No warranty if device was opened.
