Product description
• LED emergency module suitable for direct installation in ceilings
• Complete set with integrated electronics, LED module, heat sink, optics and battery
• Includes click-in multi-lens option for anti-panic, escape route and spot illumination
• DALI interface and automatic test function
• Small size ceiling hole, 40 – 43 mm diameter, 80 mm height

Properties
• Output power 1.5 W
• Very low stand-by power loss
• White or black housing colour options
• Non-maintained variant
• 1, 2 or 3 h rated duration (separate variants)
• White or black housing color options
• Plug-in Lithium Iron Phosphate battery with strain-relief
• 5 years guarantee (conditions at www.tridonic.com) electronic (LED Driver)
• 4 years guarantee battery

Technical data
Rated supply voltage AC 220 – 240 V
Input voltage range AC (tolerance for safety) 198 – 264 V
Input voltage range AC (tolerance for performance) 198 – 254 V
Mains frequency 50 / 60 Hz
Overvoltage protection 320 V (for 48 h)
Time to light (emergency operation) < 0.5 s from detection of emergency event
THD normal operation (maintained operation, at 230 V, 50 Hz, charging) 7% %
Output current tolerance ± 5 %
LF current ripple ± 5 %
Ambient temperature ta (insulated ceilings) +5 ... +30 °C
Ambient temperature ta (non-insulated ceilings) +5 ... +40 °C
Mains voltage changeover threshold According to EN 60598-2-22
Type of protection IP20
Impact protection rating® IK03
Protection class II
Colour temperature 6,500 K
Colour tolerance Mac Adams 3
Colour rendering index CRI > 80
Lifetime up to 50,000 h
EoF 1

EM ready2apply PRO 2 W
EM ready2apply
Product description
- Lithium Iron Phosphate replacement battery pack for use with EM ready2apply emergency lighting units
- 8-year design life (at up to 30 °C ambient, insulated ceilings)
- 6-year design life (at up to 40 °C ambient, non-insulated ceilings)
- 3 years guarantee

Properties
- Certified quality manufacturer
- Casing material made of polycarbonate
- Charge efficiency > 90 %
- Low self discharge
- Compact micro USB type B connector providing polarity safe battery connection
- Protection and monitoring circuit built into battery enclosure
- Deep discharge protection
- Suitable for emergency lighting equipment as per IEC 60598-2-22

1.1 Glow-wire test

according to EN 60598-1 with increased temperature of 850 °C passed.

2. Thermal data

2.1 Temperature range

According to the standard IEC 60598-1 a LED Driver for remote installation has a max. case temperature of 90 °C. The ambient temperature range ta for the EM R2A PRO is defined to meet this requirement.

2.2 Expected lifetime

2.2.1 Electronics

Average lifetime 50,000 hours under rated conditions with a failure rate of less than 10 %. Average failure rate of 0.2 % per 1000 operating hours.

2.2.2 Lifetime, lumen maintenance and failure rate for LED module

The light output of an LED module decreases over the lifetime, this is characterized with the L value. L70 means that the LED module will give 70 % of its initial luminous flux. This value is always related to the number of operation hours and therefore defines the lifetime of an LED module.

As the L value is a statistical value the lumen maintenance may vary over the delivered LED modules. The B value defines the amount of modules which are below the specific L value, e.g. L70B10 means 10 % of the LED modules are below 70 % of the initial luminous flux, respectively 90 % will be above 70 % of the initial value.

Lifetime declarations are informative and represent no warranty claim.

2.3 Storage conditions

- **Humidity**: 45 % up to max. 85 %, not condensed (max. 56 days/year at 85 %)
- **Storage time / temperature**: max. 6 months at -20 °C up to +45 °C (< 3 months at +45 °C)

Note: The devices have to be within the specified temperature range (ta) before they are operated.

- Store batteries within the specified temperature range in low humidity conditions. Optimal storage conditions are:
  - Temperature: -20...+25 °C for up to 12 months
  - Relative humidity: 65 % ±5 %
- Avoid atmosphere with corrosive gas
- Disconnect batteries before store or delivery
- Avoid storage of discharged batteries

3. Installation / Wiring

3.1 Lens assembly

- Wear gloves when mounting the lens
- Take care of the mounting direction of the escape route lens
- Use screwdriver for replacing/removing lens
- 1. + 2. Push lens clips with screwdriver via openings on both sides
- 3. Remove lens

Note: If the rated duration of operation cannot be reached the battery must be replaced. Remove mains during battery replacement.
6. Interfaces / communication

6.1 Control input (DALI DT1)

The control input is non-polar for digital control signals (DALI). The control signal is not SELV. Control cable has to be installed in accordance to the requirements of low voltage installations.

7. Functions

7.1 Status indication

System status is indicated by a bi-colour LED and by a DALI status flag. The indication LED is integrated in the bezel.

</tbody>
</table>

7.2 Testing

DALI Control

A DALI command from a suitable control unit can be used to initiate function and duration tests at individually selected times. Status flags are set for report back and data logging of results.

When a DALI bus has not been connected or when a DALI bus is connected but the DALI default DELAY and INTERVAL times have not been re-set by sending appropriate DALI commands, then the EM R2A PRO will conduct self-tests in accordance with the default times set within the EEPROM.

These default times are factory pre-set, in accordance with the DALI standard EN 62386-202, to conduct an automatic function test every 7 days and a duration test every 52 weeks. Since the DELAY time is factory pre-set to Zero, all units are tested at the same time. Test times can be changed with a command over the DALI bus.

The DELAY and INTERVAL time values must be re-set when the emergency system test times are to be scheduled by a DALI control and monitoring system.

Note that once the default values have been set to Zero, tests will only be conducted following a command from the control system. If the DALI bus is disconnected the EM R2A PRO does not revert to self-testing mode.

Note: If the battery is connected the DALI communication is only possible after power reset.

Commissioning

After installation of the luminaire and initial connection of the mains supply and battery supply to the EM R2A PRO the unit will commence charging the batteries for 20 hours (initial charge). Afterwards the module will conduct a commissioning test for the full duration. The 20 hours recharge occurs also if a new battery is connected or the module exits the rest mode condition. The following automatic commissioning duration test is only performed when a battery is replaced and fully charged (after 20 hrs) and the interval time is not set to zero, otherwise the system is expected to perform the testing.

Functional test

The time of day and frequency of the 5 seconds function test can be set by the DALI controller. The default setting is a 5 seconds test on a weekly basis.

Duration test

The time of day and frequency of the duration test can be set by the DALI controller. The default setting is a duration test conducted every 52 weeks.

For 2 h operation:

The first commissioning duration test has a time of 120 minutes, subsequent through life tests are conducted for 90 minutes. When the battery is changed or disconnected and re-connected the unit will next conduct a 120 minute test.

Test switch

Test switch is integrated in the bezel. This can be used to:

- initiate a 5 seconds function test: press 200 ms < T < 1 s
- execute function test as long as switch pressed: press > 1 s
- reset selftest timer (adjust local timing): press > 10 s

To initiate a test use a suitable tool, refer to drawing below.

Note: Press test switch carefully to avoid damaging it.

Timer reset functionality

The timer for function and duration test can be set to a particular time of the day by either pressing the test switch for longer than 10 seconds or cycling the unswitched line supply 5 times within 1 minute. The timer adjustment will enable the test start time to be defined manually at time in day when the timer was reset. It will also disable the adaptive test algorithm thereby forcing the unit to perform the test at the same time rather than it being defined by the adaptive algorithm. This function will only work provided the interval time is greater than zero (automatic test mode enabled). The delay timer value set when the unit was commissioned will be reloaded in order to randomise the tests between adjacent units.

Prolong time

Prolong time can be set by the DALI controller. This is the delay time between return of the mains supply and the end of the emergency operation. The default prolong time is set as 0 minutes as specified within the DALI standard. Indicator LED will stay off for the duration of the prolong time.
Rest Mode
Rest mode can be initiated by the DALI controller. The appropriate command should be sent after the mains supply has been disconnected and whilst the module is in emergency operation. After a mains reset the EM R2A PRO exits the rest mode. EM R2A PRO supports the re-light command via the DALI bus.
Max. rest mode duration: 21 days from fully charged battery

DALI Controller
DALI controllers and hardware/software solutions are available from Tridonic. Please refer to the Lighting controls section.

7.3 Technical data batteries

Accu Lithium Iron Phosphate
Case temperature range
to ensure 8 years design life
1.5 / 3.0 Ah, insulated ceilings +5 °C to +35 °C
Case temperature range
to ensure 6 years design life
1.5 / 3.0 Ah, non-insulated ceilings +5 °C to +45 °C
International designation IFpR 19/66
Battery voltage/cell 3.2 V
Single cell dimensions
Diameter 18 mm
Height 65 mm
Capacity one cell 1.5 Ah
Capacity two cell pack 3.0 Ah
Max. short term temperature (reduced lifetime) 55 °C
Max. number discharge cycles 50 cycles total
Packing quantity 1 pc. per carton
Comply with UN 38.3 and IEC 62133 (safety testing) protected against over charge, over discharge, charging at excessive temperatures, short-circuit and over current.

For battery data see separate data sheet.
