**Overload protection**

If the maximum load is exceeded by a defined internal limit, occurs an automatic shutdown of the LED Driver.  
 Automatic restart if the output current is below the limit.

**No-load operation**

The LED Driver is not damaged in the no-load operation. The max. output voltage (see page1) can be obtained during no-load operation.

**Over temperature protection**

Automatic shutdown of the LED Driver if the temperature limit is exceeded.  
 Automatic restart if the temperature falls below the limit.

**Glow wire test according to EN 60695-2-11**

850 °C passed.

### Wiring diagram

### Installation instructions

The switching of LEDs on secondary side is not permitted.  
A proper functioning of the LCU in combination with third party dimming devices (e.g. PWM) cannot be guaranteed.

Please note that LCU 150 complies with protection class II so special measures are needed if it is to be installed in protection class I applications / luminaires.

Please note the requirements set out in the document LED\_Betriebsgeraete\_installationshinweis.pdf (<http://www.tridonic.com/com/de/technische-doku.asp>).

To avoid the damage of the Driver, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.).

### Insulation and electric strength testing of luminaires

Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an insulation test with 500 V<sub>DC</sub> for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The insulation resistance must be at least 2 MΩ.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1500 V<sub>AC</sub> (or 1.414 x 1500 V<sub>DC</sub>). To avoid damage to the electronic devices this test must not be conducted.

Lifetime declarations are informative and represent no warranty claim.  
No warranty if device was opened.

### Wiring type and cross section

The wiring can be in stranded wires with ferrules or solid. For perfect function of the screw terminals the strip length should be 7.5–8.5 mm for the terminal.

Max. torque at the clamping screw: 0.5 Nm

The maximum secondary cable length at the terminals is 2 m.  
The LED wiring should be kept as short as possible to ensure good EMC.
